

Implementation of Screening, Brief Intervention, Referral to Treatment (SBIRT) in Medical Settings:

Learning Activity Week 1

1. View Video-“SBIRT Patient Testimonial Video”
<https://www.youtube.com/watch?v=RWbesR8-yis>

2. Consider the following questions:
 - a. How are these patients similar or different from patients that access services at your agency?
 - b. How did accessing care for their substance use affect the overall well being of those featured in the video?
 - c. How might integrating SBIRT into your agency affect the overall outcomes of those that you serve?

3. Review the patient scenarios and consider how each patient might present in your treatment setting. Would they currently be screened for these issues? How would you know if they were using substances? How would knowing the information presented in the screen and in the scenario assist you in the services that you currently provide?

Located at SBIRT.CARE (UMKC/SBIRT)- Click on the Scenarios Tab to access each case scenario.
